

Story:

A few years ago, when the designers of Contact Design conceived the idea for a lighting appliance that was different from anything ever seen before both in form and expression, they had actually been reaching back for the atmosphere of the medieval torch and brought it up to our modern times.

After a successful introduction in Denmark exposure at the lighting fair in Hanover in 1998 was the natural step. The response of the public and the press was unanimous. In the words of The Architectural Review:

"A new classic is born - the TORCH COLLECTION".

Specifications:
